ABOUT THE SYSTEM

Screens can be divided into several areas containing different messages; text, pictures, video, display pivot tables, flash information, etc. Each screen area can have one or more editors.

A flexible communication system with numerous options for the integration of internal systems such as intranet, Outlook, production data, sales figures, surveillance, telephone systems, etc. Information from internal systems is updated on a continuous basis on the screens - automatically.

VisioSign's infoscreens is especially developed for companies and organisations wanting to control a large number of screens with different users, in several languages if required. It is an extremely user-friendly system, and on-screen information throughout the organisation can be changed within minutes. Update your screens wherever you are in the world, simply via a browser and login.
